

# IRWIN COLEMAN

Atlanta, GA • (404) 933-9075 • iwc@superboom.org • superboom.org/projects

## PROFESSIONAL SUMMARY

---

Engineering leader with over 20 years of experience spanning mobile, backend, and full-stack development, including 5+ years leading iOS architecture and strategy at Libro.fm. Proven track record owning products end-to-end from platform architecture and CI/CD to team mentorship and cross-functional roadmap execution across iOS, Android, web, and backend systems (Swift, Scala, Node.js, Java). Combines deep technical depth with people leadership, having managed and mentored engineering teams.

## TECHNICAL SKILLS

---

**Leadership:** Technical team leadership, mentorship, Scrum/Agile, cross-functional collaboration with Product, UX, and business stakeholders, design reviews, process improvement

**Mobile:** Swift, SwiftUI, Combine, Swift Concurrency, Swift Package Manager, Objective-C, AVPlayer/audio streaming, watchOS, CarPlay, Android (Java, C++, NDK)

**Backend & Web:** Scala, Play Framework, Node.js, Java, Spring, C/C++, Rust (learning), PostgreSQL, RESTful API design, JSON/XML processing, WebRTC, Websockets/XHR/AJAX, React, Flux, Backbone, HTML/CSS

**Infrastructure & Practices:** Agentic development (Claude Code), CI/CD pipeline design, unit and integration testing, GitHub Actions, Xcode Cloud, AWS (Lambda, EC2, S3, CloudFront), TCP/IP networking, HCI and accessibility implementation, Unicode/internationalization

## PROFESSIONAL EXPERIENCE

---

### Mobile Engineering Lead / iOS Lead Engineer | Libro.fm | Oct 2020 - May 2026

- Led iOS engineering strategy while providing technical guidance to the Android team
- Owned architecture, design, and implementation of the Libro.fm iOS app, watchOS app, and CarPlay support, maintaining a 4.9/5.0 App Store rating
- Drove long-term iOS architecture planning, including adoption of Swift Concurrency and a modular SPM-based codebase structure, giving engineers the ability to build and test features in isolation rather than against the full app target
- Re-architected AVPlayer-based audio media handling, reducing playback-related support tickets
- Added streaming audio and multi-format support to the player, capabilities the app didn't previously have
- Established and maintained CI/CD pipelines, moving releases from a manual, error-prone process to an automated one
- Partnered with backend engineering on RESTful API design, preventing breaking changes from reaching production mobile releases
- Conducted design reviews and mentored engineers across teams on architecture and code quality, increasing their ownership of features and code review responsibilities
- Overhauled technical documentation processes, turning tribal knowledge into a searchable, self-service resource for the team
- Applied AI-assisted development tools, including Claude Code, for rapid prototyping, refactoring, and code review
- Partnered with Product Management, UX, and business stakeholders across five years of roadmap execution, spanning platform expansion (in-app shopping, watchOS), audio playback improvements, and architecture modernization

### Senior iOS Engineer | INWEGO | Jul 2017 - Oct 2020

- Core member of a small startup-style team bootstrapping the INWEGO platform end to end, a subscription app offering unlimited access to live sports events for a flat monthly fee
- Primary iOS application developer; developed features and improved unit testing structure, moving the codebase to Swift 5
- Built and maintained backend services in Scala using the Play Framework and PostgreSQL on AWS
- Upgraded the Play Framework version across three live Scala services, reducing security and maintenance risk from outdated dependencies
- Provided code reviews and mentorship to junior team members

### Engineering Manager | Stanley Black & Decker - Digital Accelerator | Feb 2016 - Apr 2017

- Supervised a team of seven engineers as Scrum Master, reporting status at the VP level
- Led the DIYZ mobile app and web portal from proof of concept to production launch, including WebRTC-based video calling for live home improvement advice (native iOS, hybrid/Cordova Android, WebRTC, Java/Spring Boot middle tier, Node.js, AWS Lambda/EC2/S3/CloudFront)
- Standardized release processes and closed a critical security gap through intrusion detection vendor adoption across all Digital Accelerator projects

- Collaborated with Product Management and business stakeholders to steer designs, capture requirements, and make technical recommendations

**Principal Engineer** | Yahoo | Oct 2014 - Aug 2015

- Tech Lead for the Search in Apps Mobile Search SDK, shipping six international SDK releases
- Led a team of six, reviewing and mentoring junior engineers
- Built out a CI/CD pipeline with unit and integration tests, including screenshot comparisons, catching regressions before they reached release
- Oversaw development of the RESTful BOSS Search API and mobile web/native front-end development in Node.js and React (Flux)

**Senior Staff Engineer, Samsung Media Solutions Center of America / Senior Platform Architect, MOVL LLC** | Samsung (MOVL acquired by Samsung) | Feb 2012 - Aug 2014

- Early employee and core member of MOVL's three-person Platform Team, building core platform features that shipped as the Samsung Multiscreen SDK (later Smart View)
- Extended the KontrolTV platform using HTML5, Backbone, Socket.IO, Node.js, and Apache Cordova (PhoneGap)
- Built portable JSONP/XHR/WebSocket communication libraries across multiple TV and mobile JavaScript runtimes, including a Netty-based Socket.IO server for Android

**Senior Software Engineer** | Internap Network Services | May 2010 - Feb 2012

- Built customer-facing cloud storage and account management web services (GWT, Java, Ruby on Rails, JAX-RS); re-architected IPScope for major IE performance gains; introduced Scrum and CI practices

**Senior Software Engineer** | Infor Global Solutions | Jul 2009 - Apr 2010

- Extended the ClearUX Ext.js-based UI framework; expanded unit testing coverage and established UI design standards with the UX team

**Senior Technical Yahoo** | Yahoo! | May 2005 - Feb 2009

- Senior engineer for the Yahoo! Toolbar (v6-8); led IE integrations, customization API, and RSS features; internationalization and accessibility support for 30+ locales

**Senior Software Engineer** | BellSouth | Aug 2004 - May 2005

- Designed a peer-to-peer instant messaging service and cross-platform UI controls; defined coding standards and software engineering methodology

**UI Team Lead** | BBC Technology | Jul 2003 - Jul 2004

- Led UI development for ESPN's Triple S broadcast screening support system (COM, ATL, WTL, Java)

**Windows Application Consultant** | BellSouth.net | May 2002 - Jul 2003

- Built email and instant messaging applications (C++, ATL, TCP/IP, XMPP/Jabber)

**Client Software Developer** | Incanta, Inc. | Jan 2000 - Apr 2002

- Lead UI developer for the Incanta Music internet radio client, later scaling to a four-person team; work helped secure \$15M in VC funding

**Member of Scientific Staff** | Nortel Networks | Jun 1996 - Sep 1998

- Developed network management user interfaces (C++ on Unix) and AccessNode Express (C for pSOS+)

## EDUCATION

---

**Georgia Institute of Technology**

M.S., Computer Science

B.S., Computer Science
